尼得科株式会社 NIDEC CORPERATION

致力于成为-稳健成长的百年企业

Nidec is committed to becoming a robustly growing century-old enterprise.

尼得科创立于1973年，集团的业务覆盖全球各个角落，是全球首屈一指的马达驱动供应商。尼得科集团在全球拥有近347家子公司和分支机构，10万多名员工分布在全球106个生产基地。凭借独创的技术及先进的产品，为电梯、通讯、办公自动化、家电、汽车、工业、环境能源等行业领域提供持续发展的安全动力。

Nidec was founded in 1973, and the group's business covers every corner of the globe, making it a leading supplier of motor drives worldwide. The Nidec Group has nearly 347 subsidiaries and branches globally, with over 100,000 employees spread across 106 production bases around the world. With its original technology and advanced products, it provides a safe and sustainable power for the development of industries such as elevators, communications, office automation, home appliances, automobiles, industry, and environmental energy.

NKET凭借其多元的国际文化背景，为全球各个市场提供符合各国安全标准的解决方案。它致力于为全球电梯市场提供可靠且安全的技术方案和产品。

面对全球不同地区的标准化和差异化的产品需求，NKET拥有极为丰富的产品解决方案。它已经为包括美国、澳大利亚、英国、新加坡等50多个国家和地区提供了符合各国安全标准要求的电梯和自动扶梯解决方案。

凭借专业过硬的自有研发技术和长期的实践经验，NKET已在北美及世界各地扎根。它为海外发达国家的众多商业项目、公共项目、住宅项目以及特殊电梯应用提供电梯设备，其中更包括了医院、银行大楼、高层住宅楼、机场和火车站等高端项目。

NKET with its diverse international cultural background, provides solutions that meet the safety standards of various markets around the world. It is committed to offering reliable and safe technical solutions and products for the global elevator market.

Facing the standardized and differentiated product demands from different regions around the world, NKET has an extremely rich set of product solutions. It has provided electric and escalator solutions that meet the safety standards required by more than 50 countries and regions, including the United States, Australia, the United Kingdom, and Singapore.

With professional and solid in-house R&D technology and long-term practical experience, NKET has taken root in North America and around the world. It supplies elevator equipment for numerous commercial projects, public projects, residential projects, and special elevator applications in developed countries overseas, including high-end projects such as hospitals, banking complexes, high-rise residential buildings, airports, and train stations.

我们是全球领先的电动机和控制系统制造商

We are the world's leading global manufacturer of electric motors and controls

专业的设计团队 Professional Design Team

- ◆ 核心专业能力 Core professional competence
- ◆ 严格的研发设计流程 Strict R & D design process
- ◆ 专业的EMC和功能测试能力 Professional EMC and functional testing capabilities
- ◆ 坚定不移的质量承诺 Unwavering quality commitment

提炼的系统方法 The Method of System Refinement

- ◆ 经过国内、外改造项目实践总结，提炼系统方法
Refined through the summarization of domestic and international modernization project practices, a systematic approach has been developed.
- ◆ 满足不同梯型&需求的改造要求
It meets the modernization requirements of different scales and needs.

全球的项目案例 Global Project Case

- ◆ 超过10000项目 More than 10,000 projects
- ◆ 案例覆盖全球50多个国家 Cases cover more than 50 countries
- ◆ 涉及多品牌电梯改造 Involves multi-brand elevator transformation

良好的客户服务&评价 Good Customer Service & Reviews

- ◆ 管家式服务
- ◆ 客户口口相传
- ◆ 转介绍新客户
- ◆ 我们对质量的坚持和对细节的关注赢得了客户的信赖和高度评价，建立了良好的市场声誉
Our commitment to quality and attention to detail has earned us the trust and high praise of our clients, establishing a good market reputation

K-MC1000 一体化控制系统 Integrated Control

产品特点 Features

- 控制器和驱动单元的一体化设计提升了产品的性能，提高了系统的执行效率。
FUSION™ combines elevator control with inverter, improving system performance
- 满足EN81-20标准：UCMP，门锁短接检测，门旁路功能，底坑检修功能
Meets the EN81-20 standard: UCMP, door lock short detection, door lock bypass function, pit inspection function
- 定制S运行曲线，适用于不同应用场所
Custom S-curve, suitable for different applications
- 满足客户项目定制功能 Project based customization
- UCMP现场测试功能 UCMP field test function
- 超短距离运行 Ultra short floor operation
- 智能扭矩控制 Intelligent pre-torque
- 空载功率法 Auto counterweight percentage estimation
- 精简调试 Streamlined parameter setup.
- 内置群控 Roaming dispatching
- 井道绝对位置定位系统(选配)
Shaft absolute position landing system (Optional)
- 轿厢调试 Elevator Cabin Debugging Features

适用范围 Applications

梯型 Elevator type	有机房或无机房 MRL and MR elevator
最大梯速 Maximum speed	3 m/s
最大楼层 Maximum floor	128层 128 Floors
单梯 Single elevator	全集选 Selective collection
内置群控 Roaming dispatching	6台电梯群控 6 Car group control
DBD	8台电梯目的楼层控制 8 Car DBD floor control
适配编码器 Encoder supported	SIN/COS & ABZ
容量范围 Power range	5.5 ~ 75kW

K-MC1000 一体化控制器
K-MC1000 Integrated Elevator Controller

K-MC1000 一体化控制柜
K-MC1000 Integrated Elevator Control

FUSION G5 一体化控制系统 Integrated Elevator Control

产品特点 Features

- Fusion G5承载着KINETEK & Control Techniques核心控制技术，是当今市场上最先进的电梯一体化控制器之一。
The Fusion G5 carries the core control technology of KINETEK & Control Techniques and is one of the most advanced elevator integrated controllers in the market today.
- 主要元器件均采用国际品牌，电子元器件配置性能稳定
The main components are all sourced from major international brands to ensure the reliability of all electronic components.
- 内置EMC滤波器，可减少对市电电源的射频辐射
Built-in EMC filter can reduce radio frequency radiation to the mains power supply
- 适配感应电机或是同步电机(内转子电机/外转子电机)，都能实现高性能的电流矢量控制。
Works with both induction motor and synchronous motor (inner rotor motor/outer rotor motor) with high-performance current vector control.
- 定制S运行曲线，适用于不同应用场所
Custom S-curve, suitable for different applications
- 井道绝对位置定位系统(选配)
Shaft absolute position landing system (Optional)
- 满足客户项目定制功能 Option for customized features
- 满足EN81-20/50标准 EN81-20 Compliance
- UCMP现场测试功能 UCMP field test function
- 超短距离运行 Ultra short floor operation
- 智能扭矩控制 Intelligent pre-torque system
- 空载功率法 Auto counterweight percentage estimation
- 内置群控 Roaming dispatching
- 轿厢调试 Elevator Cabin Debugging Features

适用范围 Applications

梯型 Elevator type	有机房或无机房 MRL and MR elevator
最大梯速 Maximum speed	4m/s
最大楼层 Maximum floor	128层 128 Floors
单梯 Single elevator	全集选 Selective collection
内置群控 Roaming dispatching	6台电梯群控 6 Car group control
DBD	8台电梯目的楼层控制 8 car DBD floor control
适配编码器 Encoder supported	SIN/COS & EnData & ABZ
容量范围 Power range	2.2 ~ 160 kW

FUSION G5 一体化控制器
FUSION G5 Integrated Elevator Controller

FUSION G5 一体化控制柜
FUSION G5 Integrated Elevator Control

FUSION 3P Integrated Control(Parallel System)

FUSION 3P — 体化控制器
Fusion 3P Integrated Elevator Controller

产品特点 Features

- 采用控制器结构与电梯功能一体化的设计理念, 节省空间&增强控制功能。
Utilizes the integrated design concept of motor control and elevator function to save space & enhance control functions.
- 直接停靠技术, S运行曲线实时计算生成, 使电梯运行更平稳、快速、精准; 300mm超短楼层精准平稳运行。
Real-time direct to floor S-curve processing to improve efficiency and ride quality. Capable to work with short floor as low as 300mm.
- 控制器I/O信号采用自定义的配置方式, 使整个系统的应用更加灵活。
Field programmable inputs / outputs for improving flexibility.
- 采用并行通讯技术, 集成控制厅门&轿厢呼梯信号以及门机控制信号。
Utilize parallel connections for all the wirings, including door interface and car/hall calls.
- 并行通讯与低楼层的配置模式, 更加适合于电梯控制系统的灵活应用。
Simple design for low rise applications.
- 安装引导模式的调试技术, 使现场调试操作更加便捷。
Provides quick start up menu for ease of installation.
- 丰富的门功能设定, 可以满足电梯门控制多样性的要求。
Feature rich system that can interface with various types of door systems.
- 显示输出方式: 二进制编码、BCD码、七段码。
Available display interface format: Binary, BCD code, 7 segments.

通用规格 General Specifications

项目 Features	规格 Descriptions
1. 技术性能特性 Technical performance characteristics	
1.1. 输入电压范围 Input voltage range	3P AC 220V~240V -15~10% 3P AC 380V~440V -15~10%
1.2. 最大楼层 Maximum floor	17层 17 Floors
1.3. 最大梯速 Maximum speed	2m/s
1.4. 并联 Duplex	2台电梯并联 2 car duplex control
2. 外围接口特性 Peripheral interface characteristics	
2.1. 开关量低压输入接口 Low voltage input terminals	17个外围输入信号监视接口 17-low voltage input
2.2. 开关量输入&输出复用接口 Digital input & output multiplexing interface	33个呼梯按钮&开关门按钮信号控制接口 33 call button & door open / close button signal control interfaces
2.3. 高压检测输入口 High-voltage input	3个门锁&安全回路高压监视接口 3-high-voltage input port
2.4. 开关量输出口 Digital output	19继电器输出信号控制接口 19-relay output port.
2.5. CAN通讯端子 CAN communication terminal	1个CAN通讯端子 1 CAN communication terminal
2.6. 编码器端子 Encoder terminal	正余弦、增量型编码器接口 Sin/cos, incremental encoder interface

K-ESC2扶梯功能安全控制器 K-ESC2 Escalator Safety Protection Device

产品特点 Features

- 自动扶梯和自动人行道可编程电子安全相关系统 (PESSRAE)
Microprocessor based escalator or moving walk control system
- 参数设置简单、安装方便灵活、无需调试、支持多种品牌传感器的配套使用
Simple installation, no adjustments required and supports various brands of sensors
- PESSRAE功能设计
Design for Programmable Electronic System in Safety Related Application for Escalator (PESSRAE) compliance
- 防护等级 Protection class: IP54
- 安全完整性等级 Safety Integrity Level 2: SIL2
- 符合《电梯型式试验规则》GB16899-2011, GB/T20438-2006, IEC62061:2005, ISO22201:2009, EN115-1:2008+A1:2010等规定。
Compliances: Lift Type Examination 2012, GB16899-2011, GB/T20438-2006, IEC62061:2005, ISO22201:2009, EN115-1:2008+A1:2010.
- 梯级超速保护、梯级逆转保护、梯级缺失保护、扶手带欠速保护、制动器未释放保护、检修盖板打开保护、制停距离监测、梯级欠速保护
Over speed protection, reversal protection, missing step protection, handrail speed monitoring, brake operation monitoring, inspection cover interlock, stopping distance monitoring, step speed monitoring

K-ESC2 扶梯功能安全控制器
K-ESC2 Escalator Safety Board

K-MC2000自动扶梯/自动人行道控制系统 K-MC2000 Escalator/Travelator Control System

产品特点 Features

- 采用变频器控制模式或 Y/Δ 控制模式
Supports VVVF or Y/Δ control
- 故障显示器, 能快速简易辨识运行故障。
Clear fault display to easily identify problems.
- 符合 GB16899-2011, GB/T20438-2006, IEC62061:2005, ISO22201:2009。
Compliance: GB16899-2011, GB/T20438-2006, IEC62061:2005, ISO22201:2009
- 可提供局域网监控功能
Supports LAN based monitoring
- 具有独特的抗干扰设计, 系统抗干扰性能强
Robust system noise isolation design
- 适用于梯级超速保护、梯级逆转保护、梯级缺失保护、扶手带欠速保护、制动未释放保护、检修盖板打开保护、制停距离监测、梯级欠速保护
Safety features: Over speed protection, Reversal protection, Missing step protection, Handrail speed monitoring, Brake operation monitoring, Inspection cover interlock, Stopping distance monitoring and Step speed monitoring

K-MC2000 扶梯控制柜
K-MC2000 Escalator Control

K-MC8000-VVVF 控制柜 Elevator Controller

高速 High Speed

- 最大梯度: 8m/s
- 最大楼层: 128 层
- 最大容量: 200kW
- 绝对距离原则下的智能速度控制方式
- Maximum Speed: 8m/s
- Maximum Number Of Floor: 128 Floors
- Maximum Motor Size: 200kW
- Serial speed control with absolute position and velocity feedback

舒适 Comfortable

噪音及振动(公司标准)

Noise & Vibration Standard

- 水平振动 (A95)max ≤ 7 gal
- 垂直振动 (A95)max ≤ 7 gal
- Vertical Vibration
- 噪音测定值 max ≤ 55 dB
- Noise Measurement

安全 Safety

- 与控制系统结合实现防错层保护
Integrated with control system for robust floor position protection
- 节省原有井道系统内的平层插板、平层开关、强迫减速开关、限位开关等信号开关
Eliminates the need for leveling vanes and switches, terminal slowdown limit switches, normal limit switches, etc. which are required for a traditional shaft system
- 绝对位置和速度检测, 可实时检测轿厢的位置和速度信息
Absolute position and speed detection for real-time information
- 与控制系统结合实现门锁短接检测
Combined with control system to detect shorted door locks.

集成功能 Function	安全等级 Safety Integrity Level (SIL)
预开门功能 Pre-opening function	SIL3
开门再平层功能 Re-leveling with doors open function	SIL3
轿厢意外移动(UCMP)保护功能 Unintended Car Movement Protection (UCMP)	SIL3
超速保护功能 Overspeed protection	SIL3
ETSL 减行程功能 ETSL reduced stroke buffer function	SIL3

绝对位置控制系统 Absolute position landing system

环保 Environmentally Friendly

能源回馈系统在高速控制中是标准配置的, 它在电梯满载下行或空载上行运行期间将“再生”能源, 并回馈建筑物的电网系统, 可供其他的电力设备使用, 从而减少电力消耗。

有源前端(AFE)是最有效的解决方案。可用于实现最严格的谐波失真控制(THDi<5%), 与具有谐波滤波器的多个并行能源回馈单元相比, AFE 解决方案可以更大的提供成本优势。

The regenerative system is a standard configuration in high-speed control. It will take the energy generated from the motor when the elevator is running full-load down or no-load up and feed it back to the grid system of the building, which can be used by other power equipment, thereby reducing power consumption.

For regenerative system, Active Front End (AFE) is the most effective solution. AFE can be used to satisfy the most stringent harmonic distortion levels (THDi < 5%). An AFE solution can provide a cost advantage in comparison to multiple parallel line regenerative units with harmonic filters.

电磁兼容 EMC

控制柜的 EMC 电磁兼容与干扰抑制是电梯安全运行的基础, 经过设计优化, 具有电流和电压限制功能的 EMC 模块, 适用于高速电梯控制的应用, 确保系统稳定运行。

满足EMC标准 (EN12015、EN12016、EN61000-4等)

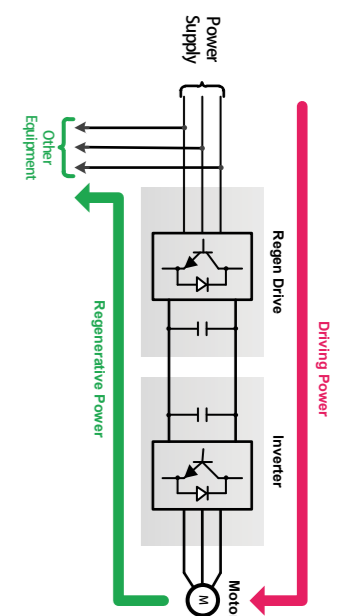

减小馈电电缆辐射干扰, 减小输入电流尖峰, 抑制系统干扰, 减少全波整流电路产生的系统低频干扰。谐波滤波器具有创新性的解决方案, 类似电抗器安装, 占用空间小, 可以方便地嵌入电控系统中。

The Electro-Magnetic Compatibility (EMC) and interference suppression of the elevator controller is the basis for the safe operation of elevators. With precise design, the EMC filter with current and voltage limiting functions is suitable for high-speed elevator control applications to ensure the stable operation of the system.

It meets EMC standards (EN12015, EN12016, EN61000-4, etc.)

Reduce feeder cable radiation interference; reduce input current spikes and suppress system interference; reduce system low-frequency interference generated by the full-wave rectifier circuit.

Harmonic filter is an innovative solution with very small size and can be easily embedded in the elevator control system.

DBD系统介绍

只需要选择您的目的楼层，即可为您提供完美的电梯体验

DBD系统让电梯更智能、高效、舒适，更易于使用，使乘客有序乘坐电梯，让等候大厅井然有序；此外，电梯轿厢不再拥挤，减少不必要的停梯次数，让乘客花更少的时间到达目的楼层。

传统的电梯群控系统只能采集乘客所需的行驶方向(上行或下行)，DBD系统具有更智能的信息记录与分析能力(例如：用户所需的楼层，乘客数量，残疾人服务等)；有了更多的信息，DBD系统可大大提高信息处理能力，提升电梯系统性能，缩短乘客等候时间，减少了电梯停留时间并提高了乘客的舒适度。最为显著的是，DBD系统可以完美的解决在传统群控系统中难以应付的流量高峰问题。

Just choose your destination
Will provide you with a perfect elevator experience

The DBD system makes the elevator more intelligent, efficient, comfortable, and easy to use, allowing passengers to take the elevator in an orderly manner and keeping lobby in order. In addition, the elevator is no longer as crowded, reducing the number of unnecessary stops, allowing passengers to spend less time to reach the destination floor. The traditional elevator group control system can only collect the travel direction (up or down) required by the passengers. The DBD system has more intelligent information recording and analysis capabilities (such as the destination floor required by the user, the number of passengers, disabled services, etc.); With more information, the DBD system can greatly improve information processing capability, improve elevator system performance, shorten passenger waiting time, reduce elevator intermediate dwell time and improve passenger comfort. Most notably, the DBD system can perfectly solve the traffic peak problem that is difficult to cope with in the traditional group control system.

高效 • 舒适 • 安全
Efficient • Comfortable • Safe

大厅操作面板(DID)
当乘客输入目的楼层时，会显示分配给目的地的电梯编号。

Destination Input Device (DID)
When the passenger enters their destination floor, the screen will display the elevator that is assigned to the passenger.

无论是在办公大楼、酒店、医院,或是住宅区等高密度人群区域，DBD系统都可以通过人工智能、模糊算法、高峰预测等先进的电梯调度控制，实现DBD系统的优势。

Whether in high-density crowd areas such as office buildings, hotels, hospitals, or residential areas, the DBD system can realize the advantages of the DBD system through advanced elevator dispatch control such as artificial intelligence, fuzzy algorithms, and peak forecasts.

1. 提高电梯的运行效率 Improve the operating efficiency of elevators.
2. 减少乘客的等待时间 Reduce the waiting time of passengers.
3. 增加乘客的安全性和舒适度 Increase the safety and comfort of passengers.
4. 增强乘客的满意度 Enhance passenger satisfaction.

DBD系统特点 Features

更智能

DBD系统可以将目的楼层相同的乘客归为一组，减少中间站点，减少乘客的等待时间，从而缩短电梯运行时间并且减少中间站点的停留时间。该处理能力特别是在繁忙的运行时段（例如在办公楼中很常见的早高峰）期间得到了改善

更舒适

乘客在进入电梯之前先选择目的楼层，而无需在人群中费力地按下轿厢内的楼层按钮。此外，乘客在DID面板输入目的楼层时，DBD系统就知道乘客到达电梯等候区的时间，从而会计算好电梯的到达时间，乘客也不必担心会错过电梯

更安全

DBD系统可以和建筑物的门禁系统集成在一起。用户可以使用刷卡或其他安防系统，从而限制了未经授权人员使用电梯的行为，增加了整个建筑物的安全性

更多指引

DBD系统通过DID操作面板，电梯标识，电梯停站指示器，能够快速引导乘客进入正确的电梯

更多空间

DBD系统可以为每台电梯分配正确的乘客人数，因此轿厢内不太可能拥挤。由于每台电梯仅服务于指定楼层的乘客，因此运行时间将很短

易于访问

对于需要更多时间或空间的人，可以使用VIP功能或特殊按钮(残疾人按钮)激活DBD辅助功能。这样可以使乘客获得更长的时间到达等候区，和更长的电梯开门等待时间，并且系统会减少乘客的分配，使轿厢的可用空间更大

Smarter

The DBD system can group passengers with the same destination into one group, reducing intermediate stations and reducing passenger waiting time, thereby shortening elevator running time and reducing the staying time of intermediate stations. This processing capacity will have the most benefit during busy traffic hours (such as morning peaks that are common in office buildings).

More Comfortable

Passengers choose a destination before entering the elevator without having to push the floor button in the car. In addition, when passengers enter their destination on the DID operating panel, the DBD system knows the time for the passenger walk to the elevator. Together with the arrival time of the elevator, the DBD system will ensure that the passengers will have enough time to catch the elevator.

Safer

The DBD system can be integrated with the building's access control system. Users can use security cards or other security systems, thereby restricting unauthorized personnel from using elevators and increasing the safety of the entire building.

Better Guidance

The DBD system can quickly guide passengers into the correct elevator through the DID operating panel, along with the elevator identification.

More Space

The DBD system can assign the correct number of passengers to each elevator, so the car is unlikely to be too crowded. Since each elevator only serves passengers on designated floors, the travel time will be shorter.

More Guidance

For those who need more time or space, you can use the VIP function or special buttons (buttons for the disabled) to activate the DBD auxiliary function. This allows passengers to get longer time to arrive at the waiting area, and longer waiting time for the elevator to open the door, and the system will reduce the allocation of passengers and make the available space of the car larger.

DBD优势 Advantages of DBD

Without DBD
 乘客在等待电梯时无法知道哪台电梯会先到达。当一台电梯到达时，乘客不管目的地是哪一层站，都会争先恐后地进入轿厢。
 Traditional dispatching results in a high mix of destinations per car, requiring more stops and longer travel time.

With DBD
 当乘客进入等候大厅时，通过DID面板输入目的楼层会指示乘坐哪部电梯。当乘客前往指定的电梯时，轿厢已在路上，大幅减少乘客的等候时间。
 Destination dispatching results in a low mix of destinations per car, requiring fewer stops and shorter travel times.

当乘客输入目的楼层时，DID面板会立即显示哪台电梯将服务于该楼层。由于目的地楼层已经登记，乘客无需在轿厢内按下按钮。此外，按目的地分散乘客可以防止电梯拥堵，并最大限度地减少等待和乘梯时间。

When a passenger enters a destination floor, DID operating panel will immediately indicate which car will serve the floor. Because the destination floor is already registered, the passenger does not need to press any button in the car. Furthermore, DBD disperses passengers by destination preventing congestion in cars and minimizing waiting and traveling times.

简易操作 Simple Operation

Step 1
选择您的目的楼层
 找到操作面板(DID),按列表选择目的地
SELECT YOUR DESTINATION
 Find a DID operating panel, press an available destination on the list

Step 2
领取乘坐电梯编号
 请注意分派的是哪部电梯
RECEIVE AN ELEVATOR TO USE
 Please note which elevator was dispatched

Step 3
前往您的电梯
 按电梯门上的编号，找到并等待您的电梯
PROCEED TO YOUR ELEVATOR
 Follow the number on the elevator door, find and wait for your elevator

辅助功能 Accessibility for Disabled Persons Compliance

激活残疾人辅助功能键可使扬声器播放目的层信息，在听到所需楼层时第二次按下按钮，然后扬声器将播放指派的电梯编号并提供前往该电梯的方向。指派的电梯到达后将延长电梯到达和开门时间。

Activation of the Accessibility Function key enables a speaker that verbally requests the button be pressed a second time when the desired floor is called out. Then the speaker announces the assigned car designation and provides directions to that car. A unique tone is also played.

The assigned elevator annunciator repeats the unique tone to further assist car location. Arriving car annunciators announce the car label and floors serviced. Passenger boarding time is also extended.

DBD系统配置

多元化配置模式 Various Configuration Modes

DBD系统有两种经典配置模式，可以根据您的需求，更轻松、更多元地个性化定制系统。
 The DBD system has two main configuration modes and can be customized to meet your needs.

纯DBD模式 Full DBD Mode

在纯DBD模式配置中，所有的楼层都配置有DID操作面板和电梯编号标识；因此在轿厢内将没有COP操作面板，所有的乘客需通过DID面板输入目的楼层并获得乘坐的电梯编号。

对于高流量的电梯群组，复杂的建筑系统(例如：L形、T形或圆形等)，推荐使用该配置模式。

In the full DBD mode configuration, all floors are equipped with DID operating panels and elevator number identification; therefore, there will be no Car Operating Panel (COP) in the car, and all passengers need to enter their destination through the DID operating panel and follow the directions.

For high-traffic elevator groups and complex building systems (such as L-shaped, T-shaped or circular, etc.), this configuration mode is recommended.

※ 轿厢内无COP操作面板
 No COP operating panel in the car

混合DBD模式 Mixed DBD Mode

在混合DBD模式配置中，仅在建筑物在大厅配置有DID操作面板，其他楼层将保持LOP&方向灯的传统配置模式；此外，轿厢内的COP操作面板也是必不可少的。

该模式对于传统群控的改造是非常经济、有效的。

In the mixed DBD mode configuration, the DID operating panel is installed in the lobby of the building only. All other floors will maintain the traditional configuration of Lobby Operating Panel (LOP) and direction light. In addition, the COP operating panel in the car is also required.

This mode is very economical and effective for enhancement of traditional group control.

※ 轿厢内至少配置一套COP操作面板
 At least one set of COP operating panel is required in the car

系统介绍 System Introduction

借助NIOE，您可以从任何一个位置监控所有电梯和自动扶梯

NIOE系统可实时向您提供电梯信息、电梯状态、设备故障和系统管理等各种数据

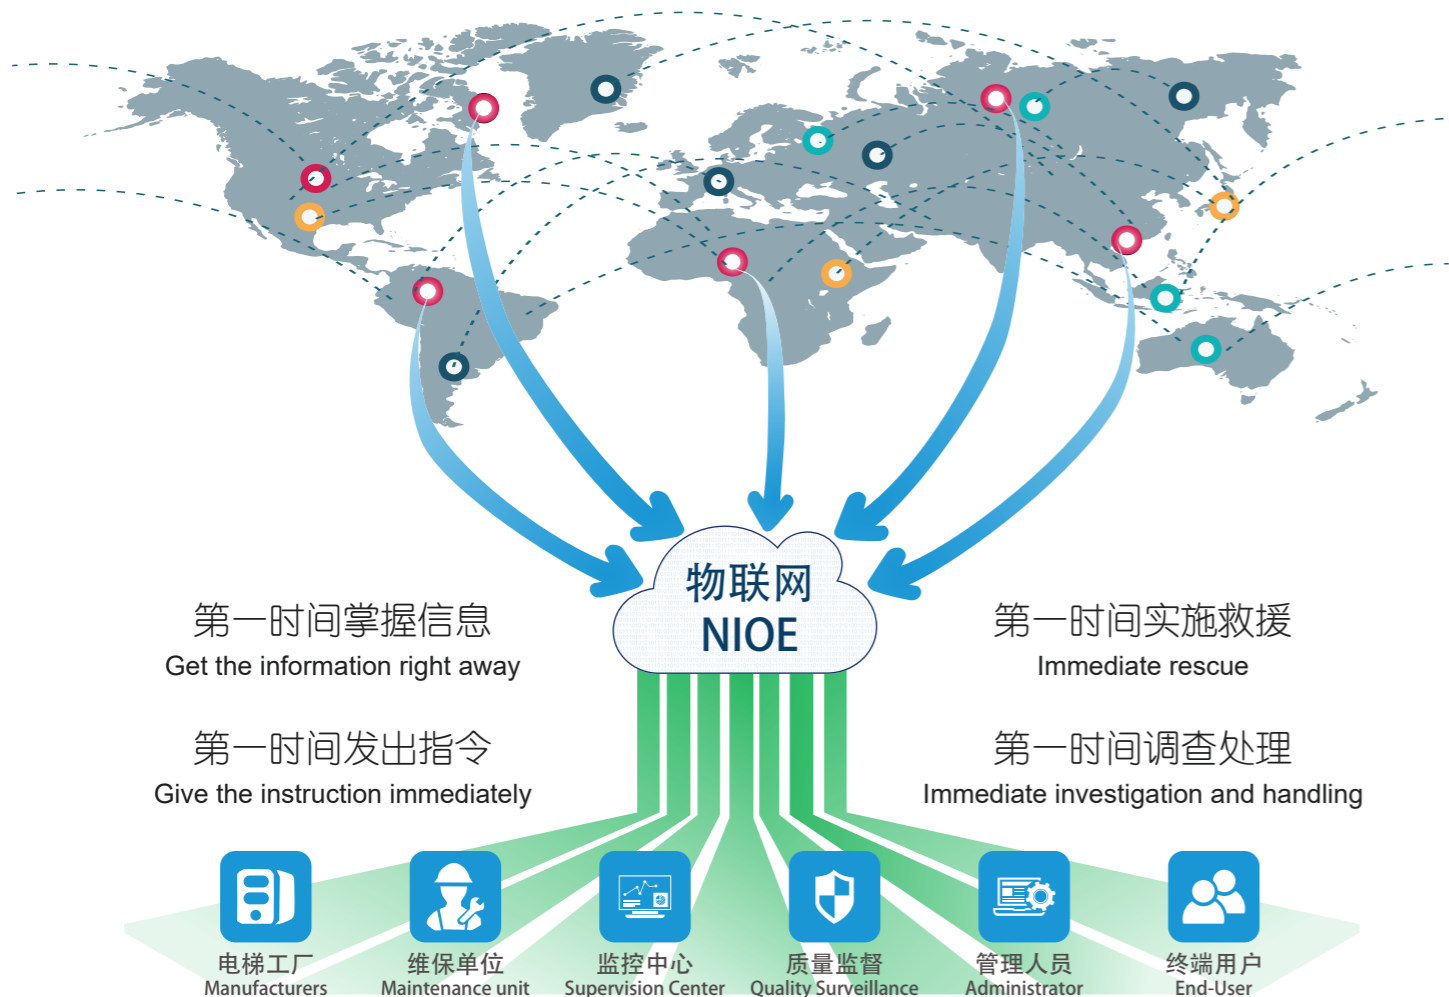

通过有线或者无线连接协议将电梯数据采集器、故障报警系统等信息整合到管理平台，经过数据分析，实现远程监测、自动报警、远程控制、诊断和维护、系统联动、数据挖掘、报表与决策支持等。

With NIOE

You can monitor all elevators and escalators from any location

The NIOE system can provide you with various data such as elevator information, elevator status, equipment failure and system management in real time.

Through wired or wireless connection, the elevator data, elevator fault and other information are sent to the cloud data management platform. Once the NIOE system collects and analysis the data, the system can support remote monitoring, automatic alarm, remote control, diagnosis and maintenance system linkage, data mining, reports, etc.

系统特点 Features

稳定

NIOE云服务器是服务器集群而产生的，故障可自动迁移，如果一台云服务器出现故障，其上面的应用就自动迁移到其他云服务器上，因此它的故障率很低。

安全

NIOE云服务器具有防攻击和欺骗的功能，快照备份，数据永久不丢失

经济

用户可以在线实时增加自己的配置，可扩展空间较大，根据自己的需求，选择性地增加服务，使资源的利用率最大化

可管理

支持整个网络系统各种设备的统一网络管理。如设备管理、故障管理、配置管理、和安全管理等基本要求

标准化

在网络设计结构上实现真正开放，基于国际开放式标准，使用户可以自由地选择不同区域与质量监督局进行对接

Stability

NIOE cloud servers are generated by server clusters, and failures can be automatically migrated. If a cloud server fails, the applications on it will be automatically migrated to other cloud servers, so its failure rate is very low.

Safe

NIOE cloud server has anti-attack, spoofing functions, and snapshot backup to ensure that no data will be lost forever.

Economic

Users can add their own configuration online in real time, and the expansion space is large. Users can selectively add services to maximize the utilization of resources according to their own needs.

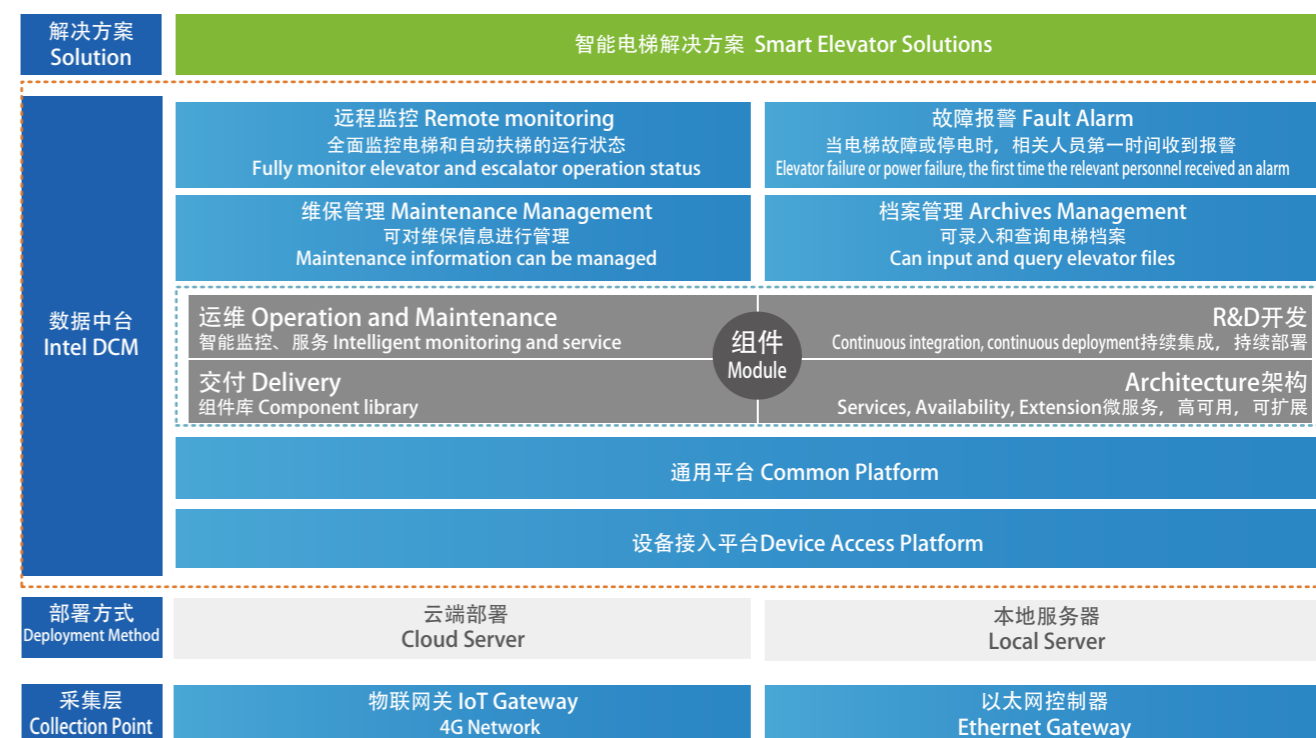

Controllable

It supports unified network management of various devices in the entire network system. Basic requirements such as device management, fault management, configuration management, and safety management.

Standardized

Real openness in the network design structure based on international open standards. Users can freely choose different regions to connect with the Quality Supervision Bureau.

配件 Sparepart

产品规格 Product Specifications

K-NIOE4000

产品名称 Product Name	4G数据网关 4G Data gateway
应用场景 Application	电梯、扶梯 Elevator, Escalator
特点 Features	4G全网通 4G Full Netcom RS232通讯 RS232 communication 低功耗 Low power consumption Micro卡槽 Micro card slot ※ 产品不配SIM卡 The product does not have a SIM card

产品规格 Product Specifications

K-N100

产品名称 Product Name	以太网数据网关 Ethernet Data gateway
应用场景 Application	电梯、扶梯 Elevator, Escalator
特点 Features	RS232通讯 RS232 communication 低功耗 Low power consumption 不产生流量费用 No traffic charges

产品规格 Product Specifications

K-NIOE4000E1

产品名称 Product Name	语音通话控制器 Voice call device
应用场景 Application	电梯 Elevator
特点 Features	一键拨号 One-touch dial 远程报警 Remote alarm 多号连拨 Continuous dialing of multiple numbers

DBD 改造项目 Modernization Project

DBD 系统让电梯更智能、高效、舒适，更易于使用，使乘客有序乘坐电梯，让等候大厅井井有条。此外，电梯轿厢不再拥挤，减少不必要的停梯次数，让乘客花更少的时间到达目的楼层。

The DBD system makes the elevator more intelligent, efficient, comfortable, and easy to use, allowing passengers to take the elevator in an orderly manner and keeping lobby in order. In addition, the elevator is no longer as crowded, reducing the number of unnecessary stops, allowing passengers to spend less time to reach the destination floor.

项目成果

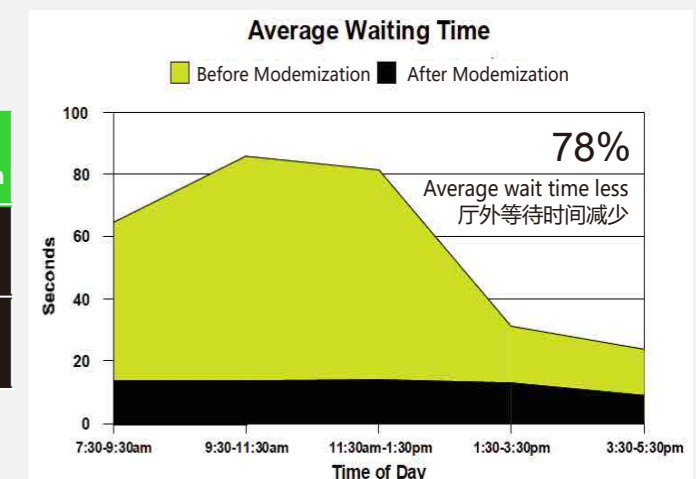

- 1.更新控制系统和调度系统
- 2.电梯提供高性能的舒适乘坐体验
- 3.DBD与门禁应用
- 4.远程访问，实时监控，连接和诊断
- 5.目的地的调度系统明确乘客到其指定的电梯
- 6.提高群控效率，降低高达70%的呼叫等待时间
- 7.在高峰时段对更多的乘客交通管制进行了改进

Project outcome

1. Update the control system and dispatching system.
2. The elevator provides a high performance and comfortable ride.
3. Turnstile security with DBD.
4. Remote access, real-time monitoring, connection and diagnosis.
5. The DBD dispatch system directs passengers to its designated lift.
6. Improve group efficiency and reduce call waiting time by up to 70%.
7. Improved traffic control for more passengers during peak hours.

测评数据 Evaluation Data

数据 Data	改造前 Before modification	改造后 After transformation
呼梯次数 Number of calls	3,130	2,496
人数 Number of people	3,200	5,000+

定制改造 Customized Modernization

新加坡HDB项目

HDB Modernization Project (Singapore)

为全面满足所有HDB要求而定制的设计：
Customized design to fully meet all HDB requirements

- 与当地政府LMD监控系统接口
Interface with local government LMD monitoring system
- 定制不间断电源 (UPS) 接口
Customized UPS interface
- 门恶作剧检测与报警系统
Door vandalism detection with alarm
- 尿液检测系统接口
Urine detection system interface

三开门电梯

定制控制系统与机械结构，控制三个门在不同楼层的开启与关闭

Three Entries Lift

Control three doors to open/close in different floors.

AGV跨楼层运输解决方案

自动控制AGV智能搬运机器人和自动输送线，根据AGV的电梯乘坐引导，实现楼层自动登记、AGV安全进出电梯、自动门、故障处理以及其他定制功能。

AGV Cross-floor Transportation Solution

Automatic ally control of AGV intelligent handling robot and automatic conveyor-line, According to the AGV's elevator taking guidance, Realize automatic floor registration, AGV safety entering and exiting the elevator, Automatic door, Fault handling and other customized functions.

ELGO安全控制盒应用

- 高精度平层&再平层控制 (<1mm)
- 减行程功能(ETSL)电梯改造
- 消防员电梯改造

Safety Control Box Application

- High precision leveling & re-leveling control (<1mm)
- Reduced Travel function (ETSL) elevator retrofit
- Firefighter elevator renovation

碟式马达更换

- 机械与电气1:1替换
- 块式抱闸，更静音

Disc motor replacement

- Mechanical and electrical 1:1 replacement
- Block type brake, quieter operation

异步马达更换

- 曳引比1:1同步马达无缝替换
- 保留原机械结构，减小人工成本

Asynchronous motor replacement

- Haul-off ratio 1:1 seamless switch to synchronous motor
